

# PA3 Discussion

By Jake

# Two Programs

- Triangles.java
  - Command Line
  - Takes in size of triangle
  - Draws four triangles that size.
- Mickey.java part 2!
  - GUI (Graphical User Interface) Applet
  - Split into two files, Mickey.java and MickeyController.java
  - Mickey can be flipped upside down if you press and hold

# README, not README.txt

- MUST be name “README”, not “README.txt”, “README.doc”, or anything else
- NO FILE EXTENSIONS (we won’t accept anything else)

# Style

- Read the Style Guidelines carefully:
  - No Magic Numbers
  - File Headers and Method Headers
  - Inline Comments
  - Meaningful Variable Names
  - Use of Blank Lines
  - Lines  $\leq$  80 characters (README too!)
  - Consistent Indentation

# Use Vim (or else...)

- DO NOT use Eclipse or an IDE
  - Rick asks VIM questions on READMEs and tests! So you should know it!
- Your program MUST work on the lab computers
- Your program MUST compile to be able to turn in

# Triangles.java

- User inputs a single number, the size of the triangle, and hits enter.
- Program outputs four triangles that are that size.
- No Strings!
- Example

# Triangles - Input

- Use a Scanner
  - Again, Start by checking out the Java API
- Useful functions:
  - hasNext()
  - nextInt()
- Creating the Scanner
  - `x = new Scanner( System.in );`

# Triangles - Logic

- Loop while the number is invalid ( $< 2$ )
  - If the scanner hasNext(), take in an int and check if it's valid.
  - Else, the user has hit ctrl+d, exit.

# Triangles Logic

n=5

*						*	*	*	*	*		*	*	*	*	*						*
*	*					*	*	*	*				*	*	*	*					*	*
*	*	*				*	*	*						*	*	*				*	*	*
*	*	*	*			*	*								*	*			*	*	*	*
*	*	*	*	*		*										*		*	*	*	*	*

# Triangles Logic

n=5

row = 1

# I star, 4 spaces

5 stars

5 stars

4 stars, 1 space

[illegible]

# Triangles Logic

**n=5**

row = 2

## 2 stars, 3 spaces

4 stars, 1 space

# I space, 4 stars

## 3 spaces, 2 stars

[illegible]

# Triangles Logic

n=5

row = 3

# 3 stars, 2 spaces

# 3 stars, 2 spaces

## 2 spaces, 3 stars

## 2 spaces, 3 stars

[illegible]

# Triangles Logic

n=5

row = 4

4 stars, 1 space

## 2 stars, 3 spaces

## 3 spaces, 2 stars

# 1 space, 4 stars

[illegible]

# Triangles Logic

n=5

row = 5

5 stars

1 star, 4 spaces

4 spaces, 1 star

5 stars

*						*	*	*	*	*		*	*	*	*	*						*
*	*					*	*	*	*				*	*	*	*					*	*
*	*	*				*	*	*						*	*	*				*	*	*
*	*	*	*			*	*								*	*			*	*	*	*
*	*	*	*	*		*										*		*	*	*	*	*

# Triangles Logic

- So for any given size  $n$ , in the ' $i$ '<sup>th</sup> row, how many stars and spaces
  - For the first triangle?
  - Second?
  - Third?
  - Forth?

# Mickey Part 2!

- Same specs as last Mickey program, but:
  - If you click on Mickey *without moving* for 500 milliseconds, Mickey flips upside down.
- Also, we will be splitting the program into two classes: Mickey and MickeyController
- Example!

# Mickey Classes

- MickeyController
  - extends WindowController
  - has onMouse\_\_\_\_\_ methods
  - handles input and creates an instance of the Mickey class.
- Mickey
  - Has a constructor (that draws the head)
  - Has useful methods ie
    - flip()
    - move()
    - hide()
    - contains()
    - others...

# Mickey - Timer

- The Timer class will allow you to determine if a click has lasted 500 milliseconds
- You can find the code for the Timer in your textbook.
- Start the timer in `onMousePress()`
- End the timer in `onMouseRelease()`
- Check if it was  $\geq 500\text{ms}$  in `onMouseClicked()`

# Mickey - Click Events

- A Click (with Movement) (aka a Drag)
  - A single call to `onMousePress()`
  - Several calls to `onMouseDrag()`
  - A single call to `onMouseRelease()`
- A Click (without Movement)
  - A single call to `onMousePress()`
  - A single call to `onMouseRelease()`
  - A single call to `onMouseClicked()`

# Mickey - Click Events

- When the mouse button goes down:
  - `onMouseDown()`
- While the mouse is down, if there is movement:
  - `onMouseDownDrag()`
- When the mouse button goes up:
  - `onMouseRelease()`
- If there was no movement between the press and release
  - `onClick()`

# Extra Credit

- Each time Mickey flips, change his color through the list.
- Hint: look at the API for `java.awt.Color`

# Turnin and Verify

- To turn in the assignment, type “turnin pa3”
- To verify that your turn in was successful, type “verify pa3”
- Make sure you turn in and verify before midnight on the due date. NO Late assignments will be accepted, NO EXCEPTIONS.
